9D-HR-19690 PATENT

## IN THE CLAIMS

- 1. (currently amended) A motorized damper door assembly comprising:
- a damper frame;
- a damper door comprising a mounting portion rotatably mounted to said frame; and
- a seal member comprising a substantially vertically extending moisture barrier adjacent defining a chamber between said mounting portion and said moisture barrier.
- 2 (original) A damper door assembly in accordance with claim 1, said mounting portion and said moisture barrier forming a reservoir.
- 3 (original) A damper door assembly in accordance with claim 2 wherein said damper door mounting portion comprises a mounting body and a hollow mounting chamber within said mounting body.
- 4. (original) A damper door assembly in accordance with claim 3, said moisture barrier located within said mounting body.
- 5. (original) A damper door assembly in accordance with claim 4, further comprising a door pivot pin, said pivot pin received in said moisture barrier.
- 6 (original) A damper door assembly in accordance with claim 4, said moisture barrier extending substantially parallel to said mounting body.
- 7. (currently amended) A damper door assembly in accordance with claim 1 wherein said moisture barrier extends from said door damper frame.
  - 8. (original) A motorized damper door assembly comprising:
  - a damper frame;

PATENT

a damper door comprising a mounting portion rotatably mounted to said frame; and

- a seal member extending from said damper frame and forming a reservoir in said mounting portion.
- 9. (original) A damper door assembly in accordance with claim 8 wherein said damper door mounting portion comprises a mounting body and a hollow mounting chamber within said mounting body.
- 10. (original) A damper door assembly in accordance with claim 9, said seal member comprising a substantially vertically extending moisture barrier.
- 11. (original) A damper door assembly in accordance with claim 10, said moisture barrier located within said mounting body.
- 12. (original) A damper door assembly in accordance with claim 11, further comprising a door pivot pin, said pivot pin received in said moisture barrier.
- 13. (original) A damper door assembly in accordance with claim 11, said moisture barrier extending substantially parallel to said mounting body.
- 14. (original) A damper door assembly in accordance with claim 11 wherein said moisture barrier extends from said door frame.
- 15. (original) A motorized damper assembly for a refrigerator, said damper assembly comprising:
  - a damper frame;
  - a damper door comprising a mounting portion rotatably mounted to said frame;
- a seal member comprising a substantially vertically extending moisture barrier extending within said mounting portion; and

a door pivot pin located within said moisture barrier.

- 15. (original) A damper assembly in accordance with claim 15, said mounting portion and said moisture barrier forming a reservoir.
- 17. (original) A damper door assembly in accordance with claim 16 wherein said damper door mounting portion comprises a mounting body and a hollow mounting chamber within said mounting body.
- 18. (original) A damper door assembly in accordance with claim 17, said moisture barrier extending substantially parallel to said mounting body.
- 19. (original) A damper door assembly in accordance with claim 15 wherein said moisture barrier extends from said door frame.
- 20. (original) A damper door assembly in accordance with claim 15 further comprising a motor adjacent said door frame and coupled to said door pivot:
